**D1.1d - VISHNU Command-line interface specifications** 

## COLLABORATORS

|            | TITLE: D1.1d - VISHNU Co specifications  | mmand-line interface |           |  |
|------------|--|----------------------|-----------|--|
| ACTION     | NAME   | DATE                 | SIGNATURE |  |
| WRITTEN BY | Benjamin Isnard,<br>Daouda Traoré,<br>Eugène Pamba<br>Capo-Chichi, Kevin<br>Coulomb, and<br>Ibrahima Cissé | January 3, 2012      |           |  |

## REVISION HISTORY

| NUMBER | DATE       | DESCRIPTION  | NAME    |
|--------|------------|--|---------|
| 0      | 05/01/2011 | Formatting example   | SysFera |
| 1      | 13/01/2011 | First release  | SysFera |
| 2      | 10/02/2011 | Removed UMS::SessionStateType. Added UMS::StatusType, UMS::PrivilegeType. Modified UMS::addVishnuUser, UMS::updateUser, UMS::addLocalAccount, UMS::addMachine, UMS::updateMachine, UMS::listSessions, UMS::restoreConfiguration.     | SysFera |
| 3      | 18/02/2011 | Renamed all commands to follow C-style command names with vishnu prefix.  Added the help option to all commands.  Modified update_machine and export_commands.  Removed the VISHNU_SESSION_KEY environment variable on all commands. | SysFera |

## **REVISION HISTORY**

| NUMBER | DATE       | DESCRIPTION  | NAME    |
|--------|------------|--|---------|
| 4      | 15/04/2011 | Updates for TMS: Modified description of machineld parameter, vishnu_submit_job service. Modified name of get_all_jobs_output to get_completed_jobs_output. Added input parameter outDir to get_job_output and get_completed_jobs_output. Added vishnu_get_machine_refresh_period service. Removed set_machine_env service. Removed jobPriority option in submit_job. Updates for IMS: Add option in exportCommand, getMetricCurrentValue, getProcesses, getMetricHistory, restart and getSystemThreshold. Add services stop and getSystemInfo.  | SysFera |
| 5      | 21/04/2011 | Updates for TMS: Removed vishnu_get_machine_refresh_period and vishnu_set_machine_refresh_period services. Added UNDEFINED status of JobStatus Enum. Added UNDEFINED priority of JobPriority Enum. Removed of outputPah and errorPath of ListJobsOptions. Removed scriptContent in Job class. Added ERRCODE_ALREADY_TERMINATED, ERRCODE_ALREADY_CANCELED, ERRCODE_JOB_IS_NOT_TERMINATED in exception list. Modified values of JobPriority Enum. Modified values of QueuePriority and QueueStatus. Added UNDEFINED priority of QueuePriority. Added option queueName in vishnu_list_queues. | SysFera |
| 6      | 24/05/2011 | Updates of UMS: Added new error code for addLocalAccount and updateLocalAccount.   | SysFera |
| 10     | 15/12/2011 | Updates of TMS: Extended vishnu_submit_job options. Updates of FMS: Added recursive option to vishnu_create_dir command. Updates of UMS: Added vishnu_current_session_id command. Added -w option to connect and reconnect command.  | SysFera |

## **Chapter 1**

# Document presentation

## 1.1 Document objectives

This document presents the detailed specifications of the VISHNU command line user interface.

These specifications include the definition of all commands including administration commands.

## 1.2 Document structure

The document is divided into 4 parts corresponding to the 4 modules that compose the Vishnu system:

- UMS: Users Management Service
- TMS: Tasks Management Service
- FMS: Files Management Service
- IMS: Information Management Service

Each module corresponds to a chapter in the document, and each chapter contains the following sections:

- A first section describing the definition of all commands provided by the package.
- A second section describing the definition of all enumerated values used as command parameters.

## 1.3 References

• D1.1a: VISHNU General specifications

## 1.4 Glossary

• VISHNU admin: any user having the administrator privilege

## 1.5 Generic command definition format

This section presents the generic format used in the following chapters to describe the commands. It also details the environment variables required and the user options.

A commands is defined as follows:

#### Access

Here is detailed the access level of the command line (i.e. the privilege required to use this command)

#### **Description**

Here is detailed the purpose of the command line.

#### Example of use

Here is detailed an example of the use of the command line which starts by optional arguments preceded by a short letter and the required arguments at the end.

myCommand -l acLogin -s sshKeyPath userId

#### **Parameters**

The following table contains all the input argu<mark>ments</mark> of the command with their type and description, their short letter for options and a required flag.

| Parameter  | Type   | Option | Description                                | Required |
|------------|--------|--------|--|----------|
| userId     | string |        | This is an example of a required argument  | YES      |
| acLogin    | string | 1      | This is an example of an optional argument | NO       |
| sshKeyPath | string | S      | This is an example of an optional argument | NO       |

The following table contains the list of environment variables information. These environment variables can be mandatory or optional and the value will be overriden by the corresponding command-line option if applicable. When the user option flag is true, the value for this variable can be defined persistently as a user option stored in the database (see the "vishnu\_configure\_option" command.

## **Environment variables**

| Name               | Parameter | Туре   | Description                                   | Required | User option |
|--------------------|-----------|--------|---|----------|-------------|
| VISHNU_CONFIG_FILE | N/A       | string | This is an example of an environment variable | YES      | NO          |

#### Note:

For each command line the -h option can be used for help.

## 1.6 Environment variables and options

Here is detailed the way to use the user options which are stored in the database and environment variables in VISHNU.

## Example 1.1 Pseudo code

# **Chapter 2**

# Commands specification for User Management Service (UMS)

## 2.1 Command definitions

## 2.1.1 vishnu connect

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_connect command opens a session

## Example of use

vishnu\_connect[-h][-p closePolicy][-d sessionInactivityDelay][-s substituteUserId][-u userId]
[-w password]

#### **Parameters**

| Parameter Type         |                  | Option | Description                                    | Required |
|------------------------|------------------|--------|--|----------|
| closePolicy            | SessionCloseType | p      | is an option for closing session automatically | NO       |
|                        |                  |        | is the maximum delay in seconds between two    |          |
| sessionInactivityDelay | int              | d      | user requests when the CLOSE_ON_TIMEOUT        | NO       |
|                        |                  |        | policy is set                                  |          |
|                        |                  |        | is an admin option which allows an admin to    |          |
| substituteUserId       | string           | S      | open a session as if she was another user      | NO       |
|                        |                  |        | identified by her userId                       |          |
| userId                 | string           | u      | userId represents the VISHNU user identifier   | NO       |
| password               | string           | W      | password represents the password of the user   | NO       |

#### **Environment variables**

| Name                | Parameter   | Туре             | Description                                    | Required | User option |
|---------------------|-------------|------------------|--|----------|-------------|
| VISHNU_CLOSE_POLICY | closePolicy | SessionCloseType | is an option for closing session automatically | NO       | YES         |

## 2.1.2 vishnu\_reconnect

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_reconnect command reconnects to a session that is still active

#### Example of use

vishnu\_reconnect[-h][-u userId][-w password] sessionId

#### **Parameters**

| Parameter | Type   | <b>Option</b> | Description   | Req <mark>uire</mark> d |
|-----------|--------|---------------|---|-------------------------|
| sessionId | string |               | sessionId is the identifier of the session defined in | YES                     |
| sessionia | string |               | the database  | 1 LS                    |
| userId    | string | u             | userId represents the VISHNU user identifier          | NO                      |
| password  | string | W             | password represents the password of the user          | NO                      |

#### **Environment variables**

This command defines no environment variables.

## 2.1.3 vishnu\_add\_user

#### Access

This command line can be used by ADMIN users only

### **Description**

The vishnu\_add\_user command adds a new VISHNU user

## Example of use

vishnu\_add\_user [-h] firstname lastname privilege email

#### **Parameters**

| Parameter | Type          | Option | Description   | Required |
|-----------|---------------|--------|---|----------|
| firstname | string        |        | is the firstname of the user                        | YES      |
| lastname  | string        |        | is the lastname of the user                         | YES      |
| privilege | PrivilegeType |        | is the privilege of the user (admin or simple user) | YES      |
| email     | string        |        | is the email of the user                            | YES      |

#### **Environment variables**

This command defines no environment variables.

## 2.1.4 vishnu\_update\_user

#### Access

This command line can be used by ADMIN users only

#### Description

The vishnu\_update\_user command updates the user information except the userId and the password

## Example of use

vishnu\_update\_user[-h][-f firstname][-l lastname][-p privilege][-m email][-s status]userId

#### **Parameters**

| Parameter | Type          | Option | Description  | Required |
|-----------|---------------|--------|--|----------|
| userId    | string        |        | represents the VISHNU user identifier                | YES      |
| firstname | string        | f      | represents the updated firstname of the user         | NO       |
| lastname  | string        | 1      | represents the updated lastname of the user          | NO       |
| privilege | PrivilegeType | p      | represents the updated privilege of the user         | NO       |
| email     | string        | m      | represents the updated email address of the user     | NO       |
| status    | StatusType    | S      | represents the status of the user (LOCKED or ACTIVE) | NO       |

#### **Environment variables**

This command defines no environment variables.

## 2.1.5 vishnu\_delete\_user

#### Access

This command line can be used by ADMIN users only

#### **Description**

The vishnu\_delete\_user command removes a user from VISHNU

## Example of use

vishnu\_delete\_user[-h] userId

## **Parameters**

| Parameter | Type   | Option | Description  | Required |
|-----------|--------|--------|--|----------|
| userId    | string |        | userId represents the VISHNU user identifier of the user who will be deleted from VISHNU | YES      |

### **Environment variables**

This command defines no environment variables.

## 2.1.6 vishnu\_close

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_close command closes the session

#### Example of use

vishnu\_close[-h]

## **Parameters**

This command defines no arguments.

#### **Environment variables**

This command defines no environment variables.

## 2.1.7 vishnu\_change\_password

#### Access

This command line can be used by any VISHNU user

#### Description

The vishnu\_change\_password command changes the password

#### Example of use

vishnu\_change\_password[-h] userId

#### **Parameters**

| Parameter   | Type   | <b>Option</b> | <b>Description</b>  | Req <mark>uired</mark> |
|-------------|--------|---------------|---|------------------------|
| userId      | string |               | userId represents the VISHNU user identifier  | YES                    |
| password    | string |               | password represents the password of the user, it is an interactive parameter        | YES                    |
| passwordNew | string |               | passwordNew represents the new password of the user, it is an interactive parameter | YES                    |

#### **Environment variables**

This command defines no environment variables.

## 2.1.8 vishnu\_reset\_password

#### Access

This command line can be used by ADMIN users only

#### **Description**

The vishnu\_reset\_password command resets the password of a user

#### Example of use

vishnu\_reset\_password[-h] userId

#### **Parameters**

| Parameter | Type   | Option | Description   | Required |
|-----------|--------|--------|---|----------|
| userId    | string |        | userId represents the VISHNU user identifier of the user whose password will be reset | YES      |

#### **Environment variables**

This command defines no environment variables.

## 2.1.9 vishnu\_add\_local\_account

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_add\_local\_account command adds a new local user configuration

## Example of use

vishnu\_add\_local\_account [-h] userId machineId acLogin sshKeyPath homeDirectory

| Parameter     | Type   | Option | Description   | Required |
|---------------|--------|--------|---|----------|
| userId        | string |        | The userId represents the VISHNU user identifier of the user of the local user configuration      | YES      |
| machineId     | string |        | The MachineId represents the identifier of the machine associated to the local user configuration | YES      |
| acLogin       | string |        | accLogin represents the login of the user on the associated machine                               | YES      |
| sshKeyPath    | string |        | sshKeyPath is the path of the ssh key of the user on the associated machine                       | YES      |
| homeDirectory | string |        | HomeDirectory is the path of the home directory of the user on the associated machine             | YES      |

This command defines no environment variables.

## 2.1.10 vishnu\_update\_local\_account

#### Access

This command line can be used by any VISHNU user

#### Description

The vishnu\_update\_local\_account command updates a local user configuration

#### Example of use

#### **Parameters**

| Parameter     | Type   | Option | Description  | Required |
|---------------|--------|--------|--|----------|
| userId        | string |        | The userId represents the VISHNU user identifier   | YES      |
| usciid        | Sumg   |        | of the user of the local user configuration        | 1123     |
| machineId     | string |        | The MachineId represents the identifier of the     | YES      |
| macminera     | Sumg   |        | machine associated to the local user configuration | 1123     |
| acLogin       | string | 1      | acLogin represents the login of the user on the    | NO       |
| acLogiii      | sumg   |        | associated machine                                 | 140      |
| sshKeyPath    | string | S      | sshKeyPath is the path of the ssh key of the user  | NO       |
| SSHIRCYT atti | sumg   | 3      | on the associated machine                          | 140      |
| homeDirectory | string | d      | HomeDirectory is the path of the home directory    | NO       |
| nomedirectory | sumg   | u      | of the user on the associated machine              | 140      |

#### **Environment variables**

This command defines no environment variables.

## 2.1.11 vishnu\_delete\_local\_account

#### Access

This command line can be used by any VISHNU user

### **Description**

The vishnu\_delete\_local\_account command removes a local user configuration (for a given user on a given machine) from VISHNU

#### Example of use

vishnu\_delete\_local\_account [-h] userId machineId

#### **Parameters**

| Parameter | Type   | Option | Description  | Required |
|-----------|--------|--------|--|----------|
|           |        |        | userId represents the VISHNU user identifier of    |          |
| userId    | string |        | the user whose local configuration will be deleted | YES      |
|           |        |        | for the given machine                              |          |
|           |        |        | machineId represents the identifier of the         | _        |
| machineId | string |        | machine whose local configuration will be          | YES      |
|           |        |        | deleted for the given user                         |          |

#### **Environment variables**

This command defines no environment variables.

## 2.1.12 vishnu\_save\_configuration

#### Access

This command line can be used by ADMIN users only

#### **Description**

The vishnu\_save\_configuration command saves the configuration of VISHNU

## Example of use

vishnu\_save\_configuration[-h]

#### **Parameters**

This command defines no arguments.

#### **Environment variables**

This command defines no environment variables.

## 2.1.13 vishnu\_restore\_configuration

#### Access

This command line can be used by ADMIN users only

#### Description

The vishnu\_restore\_configuration command restores the configuration of VISHNU

#### Example of use

vishnu\_restore\_configuration [-h] filePath

#### **Parameters**

| Parameter | Type   | Option | Description   | Required |
|-----------|--------|--------|---|----------|
| filePath  | string |        | The filePath is the path of the file used to restore VISHNU configuration | YES      |

## **Environment variables**

This command defines no environment variables.

## 2.1.14 vishnu\_add\_machine

#### Access

This command line can be used by ADMIN users only

#### Description

The vishnu\_add\_machine command adds a new machine in VISHNU

#### Example of use

vishnu\_add\_machine[-h] name site language sshPublicKeyFile machineDescription

#### **Parameters**

| Parameter          | Type   | Option | Description  | Req <mark>uired</mark> |
|--------------------|--------|--------|--|------------------------|
| name               | string |        | represents the name of the machine   | YES                    |
| site               | string |        | represents the location of the machine   | YES                    |
| language           | string |        | represents the language used for the description of the machine                      | YES                    |
| sshPublicKeyFile   | string |        | contains the path to the SSH public key used by VISHNU to access local user accounts | YES                    |
| machineDescription | string |        | represents the description of the machine  | YES                    |

#### **Environment variables**

This command defines no environment variables.

## 2.1.15 vishnu\_update\_machine

## Access

This command line can be used by ADMIN users only

## Description

The vishnu\_update\_machine command updates machine description

### Example of use

vishnu\_update\_machine[-h][-n name][-s site][-d machineDescription][-l language][-t status][--k sshPublicKeyFile] machineId

#### **Parameters**

| Parameter          | Type       | Option | Description  | Required |
|--------------------|------------|--------|--|----------|
| machineId          | string     | 1      | represents the identifier of the machine   | YES      |
| name               | string     | n      | represents the name of the machine   | NO       |
| site               | string     | S      | represents the location of the machine   | NO       |
| machineDescription | string     | d      | represents the description of the machine  | NO       |
| language           | string     | 1      | represents the language used for the description of the machine                      | NO       |
| status             | StatusType | t      | represents the status of the machine   | NO       |
| sshPublicKeyFile   | string     | k      | contains the path to the SSH public key used by VISHNU to access local user accounts | NO       |

## **Environment variables**

This command defines no environment variables.

## 2.1.16 vishnu\_delete\_machine

#### Access

This command line can be used by ADMIN users only

#### Description

The vishnu\_delete\_machine command removes a machine from VISHNU

#### Example of use

vishnu\_delete\_machine[-h] machineId

#### **Parameters**

| Parameter | Type   | <b>Option</b> | <b>Descri</b> ption             | Required |
|-----------|--------|---------------|---------------------------------|----------|
| machineId | string |               | machine machine machine machine | YES      |

#### **Environment variables**

This command defines no environment variables.

## 2.1.17 vishnu\_list\_local\_accounts

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_list\_local\_accounts command lists the local user configurations

#### Example of use

vishnu\_list\_local\_accounts[-h][-a][-u userId][-i machineId]

#### **Parameters**

| Parameter       | Type    | Option | <b>Description</b>   | Required |
|-----------------|---------|--------|--|----------|
| adminListOption | boolean | a      | is an admin option for listing all local configurations of all users       | NO       |
| userId          | string  | u      | is an admin option for listing the local configurations of a specific user | NO       |
| machineId       | string  | i      | is an option for listing local user configurations on a specific machine   | NO       |

## **Environment variables**

This command defines no environment variables.

## 2.1.18 vishnu\_list\_machines

#### Access

This command line can be used by any VISHNU user

## Description

The vishnu\_list\_machines command lists the machines that are accessible through VISHNU

#### Example of use

vishnu\_list\_machines[-h][-u userId][-a][-m machineId]

#### **Parameters**

| Parameter      | Type    | Option | Description                                      | Required |
|----------------|---------|--------|--|----------|
| userId         | string  | u      | is an admin option for listing machines in which | NO       |
| usciiu         | sumg    | u u    | a specific user has a local configuration        | NO       |
| listAllMachine | boolean | a      | is an option for listing all VISHNU machines     | NO       |
| machineId      | string  | m      | is an option for listing information about a     | NO       |
| macminera      | sumg    | m      | specific machine                                 | NO       |

#### **Environment variables**

This command defines no environment variables.

## 2.1.19 vishnu\_list\_history\_cmd

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_list\_history\_cmd command lists the commands

## Example of use

vishnu\_list\_history\_cmd[-h][-a][-u userId][-i sessionId][-s startDateOption][-e endDateOption]

#### **Parameters**

| Parameter       | Type    | Option | <b>D</b> escription   | Required |
|-----------------|---------|--------|---|----------|
| adminListOption | boolean | a      | is an admin option for listing all commands of all users  | NO       |
| userId          | string  | u      | is an admin option for listing commands launched by a specific user identified by his/her userId  | NO       |
| sessionId       | string  | i      | lists all commands launched within a specific session   | NO       |
| startDateOption | long    | S      | allows the user to organize the commands listed<br>by providing the start date (the UNIX timestamp<br>of the start date is used)  | NO       |
| endDateOption   | long    | e      | allows the user to organize the commands listed<br>by providing the end date (the timestamp of the<br>end date is used). By default, the end date is the<br>current day | NO       |

#### **Environment variables**

This command defines no environment variables.

## 2.1.20 vishnu\_list\_options

#### Access

This command line can be used by any VISHNU user

## Description

The vishnu\_list\_options command lists the options of the user

#### Example of use

vishnu\_list\_options[-h][-a][-u userId][-n optionName]

#### **Parameters**

| Parameter        | Type    | Option | Description  | Required |
|------------------|---------|--------|--|----------|
| listAllDeftValue | boolean | a      | is an option for listing all default option values defined by VISHNU administrator | NO       |
| userId           | string  | u      | is an admin option for listing the options of a specific user                      | NO       |
| optionName       | string  | n      | allows the user to get the value of a specific option identified by its name       | NO       |

#### **Environment variables**

This command defines no environment variables.

## 2.1.21 vishnu\_list\_users

#### Access

This command line can be used by ADMIN users only

#### **Description**

The vishnu\_list\_users command lists VISHNU users

#### Example of use

vishnu\_list\_users[-h][-i userIdOption]

#### **Parameters**

| Parameter    | Type   | Option | Description   | Required |
|--------------|--------|--------|---|----------|
| userIdOption | string | i      | allows an admin to get information about a specific user identified by his/her userId | NO       |

#### **Environment variables**

This command defines no environment variables.

## 2.1.22 vishnu list sessions

#### Access

This command line can be used by any VISHNU user

## Description

The vishnu\_list\_sessions command lists all sessions of the user

#### Example of use

vishnu\_list\_sessions[-h][-t status][-p sessionClosePolicy][-d sessionInactivityDelay][-m machineId][-a][-u userId][-i sessionId][-s startDateOption][-e endDateOption]

| Parameter | Type       | Option | Description   | Required |
|-----------|------------|--------|---|----------|
| status    | StatusType | t      | specifies the status of the sessions which will be listed | NO       |

| Parameter              | Type             | Option | Description   | Required |
|------------------------|------------------|--------|---|----------|
| sessionClosePolicy     | SessionCloseType | p      | specifies the closure mode of the sessions which will be listed (CLOSE_ON_TIMEOUT or CLOSE_ON_DISCONNECT)   | NO       |
| sessionInactivityDelay | int              | d      | specifies the inactivity delay in seconds of the sessions which will be listed  | NO       |
| machineId              | string           | m      | allows the user to list sessions opened on a specific machine   | NO       |
| adminListOption        | boolean          | a      | is an admin option for listing all sessions of all users  | NO       |
| userId                 | string           | u      | is an admin option for listing sessions opened by a specific user   | NO       |
| sessionId              | string           | i      | allows the user to list all commands launched within a specific session   | NO       |
| startDateOption        | long             | S      | allows the user to organize the commands listed<br>by providing the start date (the UNIX timestamp<br>of the start date is used)  | NO       |
| endDateOption          | long             | e      | allows the user to organize the commands listed<br>by providing the end date (the timestamp of the<br>end date is used). By default, the end date is the<br>current day | NO       |

This command defines no environment variables.

## 2.1.23 vishnu\_configure\_default\_option

#### Access

This command line can be used by ADMIN users only

#### **Description**

The vishnu\_configure\_default\_option command configures a default option value

## Example of use

vishnu\_configure\_default\_option[-h] optionName value

#### **Parameters**

| Parameter  | Type   | Option | Description                       | Required |
|------------|--------|--------|-----------------------------------|----------|
| optionName | string |        | represents the name of an option  | YES      |
| value      | string |        | represents the value of an option | YES      |

## **Environment variables**

This command defines no environment variables.

## 2.1.24 vishnu\_configure\_option

#### Access

This command line can be used by any VISHNU user

## Description

The vishnu\_configure\_option command configures an option of the user

#### Example of use

vishnu\_configure\_option[-h] optionName value

#### **Parameters**

| Parameter  | Type   | Option | Description                       | Required |
|------------|--------|--------|-----------------------------------|----------|
| optionName | string |        | represents the name of an option  | YES      |
| value      | string | /      | represents the value of an option | YES      |

#### **Environment variables**

This command defines no environment variables.

## 2.1.25 vishnu\_current\_session\_id

#### Access

This command line can be used by any VISHNU user

### Description

The vishnu\_current\_session\_id command display the session id

#### Example of use

vishnu\_current\_session\_id[-h]

#### **Parameters**

This command defines no arguments.

#### **Environment variables**

This command defines no environment variables.

## 2.2 Parameters definitions

**Enumeration UMS::CommandStatusType Type** 

| Name    | Value |
|---------|-------|
| FAILURE | 0     |
| SUCCESS | 1     |

## **Enumeration UMS::PrivilegeType Type**

| Name  | Value |
|-------|-------|
| USER  | 0     |
| ADMIN | 1     |

## **Enumeration UMS::SessionCloseType Type**

| Name                | Value |
|---------------------|-------|
| UNDEFINED           | 0     |
| CLOSE_ON_TIMEOUT    | 1     |
| CLOSE_ON_DISCONNECT | 2     |

**Enumeration UMS::StatusType Type** 

| Name     | Value |
|----------|-------|
| INACTIVE | 0     |
| ACTIVE   | 1     |

## **Chapter 3**

# Commands specification for Tasks Management Service (TMS)

## 3.1 Command definitions

## 3.1.1 vishnu\_submit\_job

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_submit\_job command submits a job on a machine through the use of a script (scriptFilePath)

## Example of use

vishnu\_submit\_job[-h][-n name][-q queue][-t wallTime][-m memory][-P nbCpu][-N nbNodesAndCpu-PerNode][-o outputPath][-e errorPath][-M mailNotification][-u mailNotifyUser][-g group][-D workingDir][-T cpuTime] machineId scriptFilePath

| Parameter            | Type   | Option | Description   | Required |
|----------------------|--------|--------|---|----------|
| machineId            | string |        | Is the id of the machine on which the job must be submitted   | YES      |
| scriptFilePath       | string |        | The path to the file containing the characteristics (job command, and batch scheduler directive required or optional) of the job to submit.   | YES      |
| name                 | string | n      | Assigns a job name. The default is the path of job  | NO       |
| queue                | string | q      | Assigns the queue or class of the job   | NO       |
| wallTime             | int    | t      | The maximum wall-clock time during which the job can run (in seconds or in the format [[HH:]MM:]SS)   | NO       |
| memory               | int    | m      | Is the memory size that the job requires (in MegaBytes)   | NO       |
| nbCpu                | int    | P      | The number of cpu per node that the job requires  | NO       |
| nbNodesAndCpuPerNode | string | N      | The number of nodes and processors per node (in the format nbNodes:nbCpuPerNode). For example if you want to use 4 nodes with 3 cpus for each node, you must specify these numbers by "4:3" | NO       |
| outputPath           | string | 0      | Assigns the path and file for job output  | NO       |

| Parameter        | Type   | Option | Description   | Required |
|------------------|--------|--------|---|----------|
| errorPath        | string | e      | Assigns the path and file for job error   | NO       |
| mailNotification | string | М      | Assigns the notification type of the job. Valid type values are BEGIN, END, ERROR, and ALL (any state change)                                       | NO       |
| mailNotifyUser   | string | u      | The name of user to receive email notification of state changes as defined by the option mailNotification. The default value is the submitting user | NO       |
| group            | string | g      | Assi <mark>gns a jo</mark> b group name.  | NO       |
| workingDir       | string | D      | Assigns a job remote working dir  | NO       |
| cpuTime          | string | Т      | Assigns a job cpu limit time (in seconds or in the format [[HH:]MM:]SS)   | NO       |

This command defines no environment variables.

## 3.1.2 vishnu\_get\_job\_info

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_get\_job\_info command gets information on a job from its id

## Example of use

vishnu\_get\_job\_info[-h] machineId jobId

## **Parameters**

| Parameter | Type   | Option | <b>Description</b>                                   | Required |
|-----------|--------|--------|--|----------|
| machineId | string |        | Is the id of the machine on which the job is running | YES      |
| jobId     | string |        | The id of the job                                    | YES      |

## **Environment variables**

This command defines no environment variables.

## 3.1.3 vishnu\_get\_job\_progress

## Access

This command line can be used by any VISHNU user

## Description

The vishnu\_get\_job\_progress command gets the progression status of jobs

#### Example of use

 $\verb|vishnu_get_job_progress[-h][-i | \textit{jobId}][-u | \textit{jobOwner}] | \textit{machineId}|$ 

| Parameter | Type   | Option | Description  | Required |
|-----------|--------|--------|--|----------|
| machineId | string |        | Is the id of the machine to get the jobs progression                 | YES      |
| jobId     | string | i      | Specifies the id of the job whose progression the user wants to see. | NO       |
| jobOwner  | string | u      | Specifies the owner of the job.                                      | NO       |

This command defines no environment variables.

## 3.1.4 vishnu\_list\_queues

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_list\_queues command gets queues information

## Example of use

vishnu\_list\_queues[-h][-q queueName] machineId

#### **Parameters**

| Parameter | Type   | Option | Description   | Required |
|-----------|--------|--------|---|----------|
| machineId | string |        | Is the id of the machine that the user wants to list queues     | YES      |
| queueName | string | q      | if it is given, listQueues gives information only of this queue | NO       |

#### **Environment variables**

This command defines no environment variables.

## 3.1.5 vishnu\_list\_jobs

#### Access

This command line can be used by any VISHNU user

## **Description**

The vishnu\_list\_jobs command gets a list of all submitted jobs

## Example of use

vishnu\_list\_jobs[-h][-i jobId][-P nbCpu][-d fromSubmitDate][-D toSubmitDate][-u owner][-s status][-p priority][-q queue] machineId

| Parameter      | Type   | Option | Description  | Required |
|----------------|--------|--------|--|----------|
| machineId      | string |        | Is the id of the machine on which the jobs are running             | YES      |
| jobId          | string | i      | lists the job with the specified id                                | NO       |
| nbCpu          | int    | P      | lists the jobs with the specified number of CPUs per node          | NO       |
| fromSubmitDate | long   | d      | lists the jobs submitted after the specified date (UNIX timestamp) | NO       |

| Parameter    | Type        | Option | Description   | Required |
|--------------|-------------|--------|---|----------|
| toSubmitDate | long        | D      | lists jobs submitted before the specified date (UNIX timestamp) | NO       |
| owner        | string      | u      | lists the jobs submitted by the specified owner                 | NO       |
| status       | JobStatus   | S      | lists the jobs with the specified status                        | NO       |
| priority     | JobPriority | p      | lists the jobs with the specified priority                      | NO       |
| queue        | string      | q      | the jobs with the specified queue name                          | NO       |

This command defines no environment variables.

## 3.1.6 vishnu\_get\_job\_output

#### Access

This command line can be used by any VISHNU user

#### Description

The vishnu\_get\_job\_output command gets standard output and error output files of a job given its id

#### Example of use

vishnu\_get\_job\_output[-h][-o outDir] machineId jobId

#### **Parameters**

| Parameter | Type   | Option | Description  | Required |
|-----------|--------|--------|--|----------|
| machineId | string |        | gets outputPath and errorPath of a job from its id                                 | YES      |
| jobId     | string |        | The Id of the job  | YES      |
| outDir    | string | О      | The output directory where the files will be stored (default is current directory) | NO       |

#### **Environment variables**

This command defines no environment variables.

## 3.1.7 vishnu\_get\_completed\_jobs\_output

#### Access

This command line can be used by any VISHNU user

#### Description

The vishnu\_get\_completed\_jobs\_output command gets standard output and error output files of completed jobs (applies only once for each job)

### Example of use

vishnu\_get\_completed\_jobs\_output [-h] [-o outDir] machineId

| Parameter        | Type | Option  | Description | Requir <mark>ed</mark> |
|------------------|------|---|-------------|------------------------|
| machineId string |      | Is the id of the machine on which the jobs are      | YES         |                        |
|                  |      | been submitted                                      |             |                        |
| outDir string    | 0    | Specifies the output directory where the files will | NO          |                        |
|                  | 0    | be stored (by default, the current directory).      | NU          |                        |

This command defines no environment variables.

## 3.1.8 vishnu\_cancel\_job

#### Access

This command line can be used by any VISHNU user

## Description

The vishnu\_cancel\_job command cancels a job from its id

#### Example of use

vishnu\_cancel\_job[-h] machineId jobId

#### **Parameters**

| Parameter | Type   | Option | <b>Description</b>                                   | Required |
|-----------|--------|--------|--|----------|
| machineId | string |        | Is the id of the machine on which the job is running | YES      |
| jobId     | string |        | The Id of the job                                    | YES      |

#### **Environment variables**

This command defines no environment variables.

## 3.2 Parameters definitions

**Enumeration TMS::JobPriority Type** 

| Name      | Value |
|-----------|-------|
| UNDEFINED | -1    |
| VERY_LOW  | 1     |
| LOW       | 2     |
| NORMAL    | 3     |
| HIGH      | 4     |
| VERY_HIGH | 5     |

## **Enumeration TMS::JobStatus Type**

| Name               | Value |
|--------------------|-------|
| UNDEFINED          | -1    |
| SUBMITTED          | 1     |
| QUEUED             | 2     |
| WAITING            | 3     |
| RUNNING            | 4     |
| TERMINATED         | 5     |
| CANCELLED          | 6     |
| ALREADY_DOWNLOADEI | 7     |

## **Enumeration TMS::QueuePriority Type**

| Name      | Value |  |
|-----------|-------|--|
| UNDEFINED | -1    |  |

| Name      | Value |
|-----------|-------|
| VERY_LOW  | 1     |
| LOW       | 2     |
| NORMAL    | 3     |
| HIGH      | 4     |
| VERY_HIGH | 5     |

## **Enumeration TMS::QueueStatus Type**

| Name        | Value |
|-------------|-------|
| NOT_STARTED | 0     |
| STARTED     | 1     |
| RUNNING     | 2     |

## **Chapter 4**

# Commands specification for Information Management Service (IMS)

## 4.1 Command definitions

## 4.1.1 vishnu export commands

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_export\_commands command exports all the commands made by a user during a session

#### Example of use

vishnu\_export\_commands[-h][-t exportType] oldSessionId

#### **Parameters**

| Parameter    | Type       | Option | Description   | Required |
|--------------|------------|--------|---|----------|
| oldSessionId | string     |        | The id of the session to export (session has ended) | YES      |
| exportType   | ExportType | t      | The type to export                                  | NO       |

#### **Environment variables**

This command defines no environment variables.

#### 4.1.2 vishnu\_get\_metric\_current\_value

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_get\_metric\_current\_value command displays the current values of system metrics

#### Example of use

vishnu\_get\_metric\_current\_value[-h][-t metricType] machineId

| Parameter  | Type       | Option | Description            | Required |
|------------|------------|--------|------------------------|----------|
| machineId  | string     |        | The id of the machine  | YES      |
| metricType | MetricType | t      | The type of the metric | NO       |

This command defines no environment variables.

## 4.1.3 vishnu\_get\_metric\_history

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_get\_metric\_history command displays the history of values of a system metric

#### Example of use

vishnu\_get\_metric\_history[-h][-s startTime][-e endTime][-t type] machineId

#### **Parameters**

| Parameter | Type       | Option | Description                       | Required |
|-----------|------------|--------|-----------------------------------|----------|
| machineId | string     |        | The id of the machine             | YES      |
| startTime | long       | S      | The start time to get the history | NO       |
| endTime   | long       | e      | The end time to get the history   | NO       |
| type      | MetricType | t      | The type of metric searched       | NO       |

#### **Environment variables**

This command defines no environment variables.

## 4.1.4 vishnu\_get\_processes

## Access

This command line can be used by ADMIN users only

## Description

The vishnu\_get\_processes command displays the list of the VISHNU processes running on machines

### Example of use

vishnu\_get\_processes[-h][-p machineId]

## **Parameters**

| Parameter | Type   | Option | Description           | Required |
|-----------|--------|--------|-----------------------|----------|
| machineId | string | p      | The id of the machine | NO       |

### **Environment variables**

This command defines no environment variables.

## 4.1.5 vishnu\_set\_system\_info

#### Access

This command line can be used by ADMIN users only

#### **Description**

The vishnu\_set\_system\_info command updates the system information of a machine

#### Example of use

vishnu\_set\_system\_info[-h][-m memory][-d diskSpace] machineId

#### **Parameters**

| Parameter | Type   | Option | Description  | Required |
|-----------|--------|--------|--|----------|
| memory    | long   | m      | Amount of RAM memory available on the machine (in Bytes) | NO       |
| diskSpace | long   | d      | Amount of disk space available on the machine (in Bytes) | NO       |
| machineId | string |        | The id of the machine                                    | YES      |

#### **Environment variables**

This command defines no environment variables.

## 4.1.6 vishnu\_set\_system\_threshold

#### Access

This command line can be used by ADMIN users only

### Description

The vishnu\_set\_system\_threshold command sets a threshold on a machine of a system

#### Example of use

vishnu\_set\_system\_threshold[-h] value machineId type handler

#### **Parameters**

| Type       | Option                       | <b>Description</b>  | Required  |
|------------|------------------------------|---|---|
| long       |                              | The value of the threshold  | YES   |
| string     |                              | The machine ID the threshold is available                               | YES   |
| MetricType |                              | The type of the threshold   | YES   |
| string     |                              | The userId of the admin responsible for handling the threshold problems | YES   |
|            | long<br>string<br>MetricType | long string MetricType  | long String The value of the threshold String The machine ID the threshold is available MetricType The type of the threshold The userId of the admin responsible for handling |

#### **Environment variables**

This command defines no environment variables.

## 4.1.7 vishnu\_get\_system\_threshold

#### Access

This command line can be used by ADMIN users only

#### **Description**

The vishnu\_get\_system\_threshold command gets a system threshold on a machine

#### Example of use

vishnu\_get\_system\_threshold[-h][-m machineId][-t metricType]

| Parameter  | Type       | Option | Description                                       | Required |
|------------|------------|--------|---|----------|
| machineId  | string     | m      | The id of the machine where the metric is defined | NO       |
| metricType | MetricType | t      | The type of the metric                            | NO       |

This command defines no environment variables.

## 4.1.8 vishnu\_define\_user\_identifier

#### Access

This command line can be used by ADMIN users only

#### **Description**

The vishnu\_define\_user\_identifier command defines the shape of the identifiers automatically generated for the users

#### Example of use

vishnu\_define\_user\_identifier[-h] format

#### **Parameters**

| Parameter | Type   | Option | Description           | Required |
|-----------|--------|--------|-----------------------|----------|
| format    | string |        | The new format to use | YES      |

#### **Environment variables**

This command defines no environment variables.

## 4.1.9 vishnu\_define\_machine\_identifier

## Access

This command line can be used by ADMIN users only

#### **Description**

The vishnu\_define\_machine\_identifier command defines the shape of the identifiers automatically generated for the machines

## Example of use

vishnu\_define\_machine\_identifier[-h] format

#### **Parameters**

| Parameter | Type   | Option | Description           | Required |
|-----------|--------|--------|-----------------------|----------|
| format    | string |        | The new format to use | YES      |

#### **Environment variables**

This command defines no environment variables.

## 4.1.10 vishnu\_define\_job\_identifier

#### Access

This command line can be used by ADMIN users only

#### **Description**

The vishnu\_define\_job\_identifier command defines the shape of the identifiers automatically generated for the jobs

## Example of use

vishnu\_define\_job\_identifier[-h] format

#### **Parameters**

| Parameter | Type   | Option | Description           | Required |
|-----------|--------|--------|-----------------------|----------|
| format    | string | /      | The new format to use | YES      |

#### **Environment variables**

This command defines no environment variables.

## 4.1.11 vishnu\_define\_transfer\_identifier

#### Access

This command line can be used by ADMIN users only

#### Description

The vishnu\_define\_transfer\_identifier command defines the shape of the identifiers automatically generated for the file transfers

#### Example of use

vishnu\_define\_transfer\_identifier[-h] format

#### **Parameters**

| Parameter | Type   | Option | Description           | Required |
|-----------|--------|--------|-----------------------|----------|
| format    | string |        | The new format to use | YES      |

#### **Environment variables**

This command defines no environment variables.

## 4.1.12 vishnu\_load\_shed

#### Access

This command line can be used by ADMIN users only

#### Description

The vishnu\_load\_shed command sheds load on a machine

#### Example of use

vishnu\_load\_shed[-h] machineId loadShedType

#### **Parameters**

| Parameter    | Type         | Option | Description   | Required |
|--------------|--------------|--------|---|----------|
| machineId    | string       |        | The id of the machine to stop   | YES      |
| loadShedType | LoadShedType |        | Selects a load shedding mode (SOFT: stops all<br>services and they can be restarted, HARD: stops<br>all services, they cannot be restarted) | YES      |

## **Environment variables**

This command defines no environment variables.

## 4.1.13 vishnu\_set\_update\_frequency

#### Access

This command line can be used by ADMIN users only

#### Description

The vishnu\_set\_update\_frequency command sets the update frequency of the IMS tables

#### Example of use

vishnu\_set\_update\_frequency[-h] freq

#### **Parameters**

| Parameter | Type | <b>Option</b> | Description                               | Req <mark>uire</mark> d |
|-----------|------|---------------|---|-------------------------|
| freq      | int  |               | Frequency the data are updated, in second | YES                     |

#### **Environment variables**

This command defines no environment variables.

## 4.1.14 vishnu\_get\_update\_frequency

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_get\_update\_frequency command gets the update frequency of the IMS database

### Example of use

vishnu\_get\_update\_frequency[-h]

#### **Parameters**

This command defines no arguments.

#### **Environment variables**

This command defines no environment variables.

## 4.1.15 vishnu\_stop

## Access

This command line can be used by ADMIN users only

## Description

The vishnu\_stop command to stop (and do not try to relaunch) a SeD

## Example of use

vishnu\_stop[-h] processName machineId

| Parameter   | Type   | Option | Description  | Required |
|-------------|--------|--------|--|----------|
| processName | string |        | The name of the process (the name of the executable) | YES      |
| machineId   | string |        | The id of the machine                                | YES      |

This command defines no environment variables.

## 4.1.16 vishnu\_get\_system\_info

#### Access

This command line can be used by any VISHNU user

## Description

The vishnu\_get\_system\_info command to get the system info on a machine

#### Example of use

vishnu\_get\_system\_info[-h][-m machineId]

#### **Parameters**

| Parameter | Type   | Option | <b>Des</b> cription | Required |
|-----------|--------|--------|---------------------|----------|
| machineId | string | m      | The machine id      | NO       |

#### **Environment variables**

This command defines no environment variables.

## 4.1.17 vishnu\_restart

#### Access

This command line can be used by ADMIN users only

## **Description**

The vishnu\_restart command to restart a SeD or a MA

#### Example of use

vishnu\_restart[-h][-v vishnuConf][-t sedType] machineId

#### **Parameters**

| Parameter  | Type    | <b>Option</b> | Description                               | Required |
|------------|---------|---------------|---|----------|
| machineId  | string  |               | The id of the machine where to restart    | YES      |
| vishnuConf | string  | V             | The path to the vishnu configuration file | NO       |
| sedType    | SeDType | t             | The type of the vishnu sed                | NO       |

#### **Environment variables**

This command defines no environment variables.

## 4.2 Parameters definitions

## **Enumeration IMS::ExportType Type**

| Name      | Value |
|-----------|-------|
| UNDEFINED | 0     |
| SHELL     | 1     |

## **Enumeration IMS::LoadShedType Type**

| Name      | Value |
|-----------|-------|
| UNDEFINED | 0     |
| HARD      | 1     |
| SOFT      | 2     |

## **Enumeration IMS::MetricType Type**

| Name          | Value |
|---------------|-------|
| UNDEFINED     | 0     |
| CPUUSE        | 1     |
| FREEDISKSPACE | 2     |
| FREEMEMORY    | 3     |

## **Enumeration IMS::ProcessState Type**

| Name      | Value |
|-----------|-------|
| UNDEFINED | 0     |
| RUNNING   | 1     |
| DOWN      | 2     |
| DELETED   | 3     |

## **Enumeration IMS::SeDType Type**

| Name     |    | Value |
|----------|----|-------|
| UNDEFINI | ED | 0     |
| UMS      |    | 1     |
| TMS      |    | 2     |
| FMS      |    | 3     |
| IMS      |    | 4     |

## **Chapter 5**

# Commands specification for File Management Service (FMS)

## 5.1 Command definitions

## 5.1.1 vishnu create file

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_create\_file command creates files on remote machines.

## Example of use

vishnu\_create\_file[-h] path

#### **Parameters**

| Parameter | Type   | Option | <b>Description</b>   | Required |
|-----------|--------|--------|--|----------|
| path      | string |        | The file to create following the pattern [host:]file path. | YES      |

#### **Environment variables**

This command defines no environment variables.

## 5.1.2 vishnu\_create\_dir

#### Access

This command line can be used by any VISHNU user

#### Description

The vishnu\_create\_dir command creates directories on remote machines.

#### Example of use

vishnu\_create\_dir[-h][-p] path

| Parameter   | Type    | Option | Description   | Required |
|-------------|---------|--------|---|----------|
| path        | string  |        | The directory to create following the pattern [host:]directory path.                    | YES      |
| isRecursive | boolean | p      | It specifies when the create command is recursive (create parent directory also) or not | NO       |

This command defines no environment variables.

## 5.1.3 vishnu\_remove\_file

#### Access

This command line can be used by any VISHNU user

## Description

The vishnu\_remove\_file command removes files from remote hosts.

#### Example of use

vishnu\_remove\_file [-h] [-r] path

#### **Parameters**

| Parameter   | Type    | Option | Description  | Required |
|-------------|---------|--------|--|----------|
| path        | string  |        | The file to remove following the pattern [host:]file path                    | YES      |
| isRecursive | boolean | r      | It specifies when the remove command is recursive (case of directory) or not | NO       |

#### **Environment variables**

This command defines no environment variables.

## 5.1.4 vishnu\_remove\_dir

#### Access

This command line can be used by any VISHNU user

## Description

The vishnu\_remove\_dir command removes directories (and subdirectories) from remote machines.

## Example of use

vishnu\_remove\_dir[-h] path

## **Parameters**

| Parameter | Type   | Option | Description   | Required |
|-----------|--------|--------|---|----------|
| path      | string |        | The directory to remove following the pattern [host:]directory path | YES      |

#### **Environment variables**

This command defines no environment variables.

## 5.1.5 vishnu\_ch\_grp

#### Access

This command line can be used by any VISHNU user

#### Description

The vishnu\_ch\_grp command changes group owner of remote files/directories.

#### Example of use

vishnu\_ch\_grp [-h] group path

#### **Parameters**

| Parameter | Type   | <b>Option</b> | <b>Description</b>  | Required |
|-----------|--------|---------------|---|----------|
| group     | string |               | the new group owner of file/directory                     | YES      |
| path      | string |               | The file/directory following the pattern [host:]file path | YES      |

#### **Environment variables**

This command defines no environment variables.

## 5.1.6 vishnu\_ch\_mod

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_ch\_mod command changes access rights of remote files/directories.

#### Example of use

vishnu\_ch\_mod[-h] mode path

#### **Parameters**

| Parameter | Type   | Option | Description   | Required |
|-----------|--------|--------|---|----------|
| mode      | mode_t |        | the access rigths of file/directory in octal system.      | YES      |
| path      | string |        | The file/directory following the pattern [host:]file path | YES      |

#### **Environment variables**

This command defines no environment variables.

## 5.1.7 vishnu\_head\_of\_file

#### Access

This command line can be used by any VISHNU user

## Description

The vishnu\_head\_of\_file command displays a few first lines of files located on remote machines.

## Example of use

vishnu\_head\_of\_file[-h][-n nline] path

| Parameter | Type   | Option | Description                                     | Required |
|-----------|--------|--------|---|----------|
| path      | string |        | The file following the pattern [host:]file path | YES      |
| nline     | int    | n      | the number of line to get                       | NO       |

This command defines no environment variables.

## 5.1.8 vishnu\_tail\_of\_file

#### Access

This command line can be used by any VISHNU user

## Description

The vishnu\_tail\_of\_file command displays a few last lines of files located on remote machines

#### Example of use

vishnu\_tail\_of\_file[-h][-n nline] path

#### **Parameters**

| Parameter | Type   | Option | Description                                     | Required |
|-----------|--------|--------|---|----------|
| path      | string |        | The file following the pattern [host:]file path | YES      |
| nline     | int    | n      | the number of line to get                       | NO       |

#### **Environment variables**

This command defines no environment variables.

## 5.1.9 vishnu\_content\_of\_file

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_content\_of\_file command displays content of files located on remote machines

## Example of use

vishnu\_content\_of\_file[-h] path

#### **Parameters**

| Parameter | Type   | Option | Description  | Required |
|-----------|--------|--------|--|----------|
| path      | string |        | The file to display following the pattern [host:]file path | YES      |

#### **Environment variables**

This command defines no environment variables.

## 5.1.10 vishnu\_list\_dir

#### Access

This command line can be used by any VISHNU user

## Description

The vishnu\_list\_dir command displays the content of a remote directory.

#### Example of use

 $vishnu_list_dir[-h][-l][-a]$  path

#### **Parameters**

| Parameter  | Type    | Option | Description  | Required |
|------------|---------|--------|--|----------|
| path       | string  |        | The directory to list following the pattern [host:]directory path      | YES      |
| longFormat | boolean | 1      | It specifies the long display format (all available file informations) | NO       |
| allFiles   | boolean | a      | Allows to display all files including hidden files                     | NO       |

#### **Environment variables**

This command defines no environment variables.

## 5.1.11 vishnu\_copy\_file

#### Access

This command line can be used by any VISHNU user

## Description

The vishnu\_copy\_file command executes a synchronous copy of file.

#### Example of use

vishnu\_copy\_file[-h][-r][-t trCommand] src dest

## **Parameters**

| Parameter   | Туре            | Option | <b>Description</b>                               | Required |
|-------------|-----------------|--------|--|----------|
| src         | string          |        | The source file to copy following the pattern    | YES      |
| 510         | Sumg            |        | [host:]file path                                 | 1 ES     |
| dest        | string          |        | The path of the destination file                 | YES      |
| isRecursive | boolean         |        | It specifies when the copy is recursive (case of | NO       |
| ISKecuisive | boolean         | 1      | directory) or not.                               | NO       |
| trCommand   | TransferCommand | t      | the command to use to perform file transfer.     | NO       |

#### **Environment variables**

| Name                | Parameter | Туре            | Description                                  | Required | User<br>option |
|---------------------|-----------|-----------------|--|----------|----------------|
| VISHNU_TRANSFER_CMD | trCommand | TransferCommand | the command to use to perform file transfer. | NO       | YES            |

## 5.1.12 vishnu\_copy\_async\_file

## Access

This command line can be used by any VISHNU user

#### Description

The vishnu\_copy\_async\_file command executes an asynchronous copy of file.

## Example of use

vishnu\_copy\_async\_file[-h][-r][-t trCommand] src dest

#### **Parameters**

| Parameter   | Туре            | Option | Description   | Required |
|-------------|-----------------|--------|---|----------|
| src         | string          |        | The source file to copy following the pattern [host:]file path      | YES      |
| dest        | string          |        | The path of the destination file                                    | YES      |
| isRecursive | boolean         | r      | It specifies when the copy is recursive (case of directory) or not. | NO       |
| trCommand   | TransferCommand | t      | the command to use to perform file transfer.                        | NO       |

#### **Environment variables**

| Name                | Parameter | Туре            | Description                                  | Required | User option |
|---------------------|-----------|-----------------|--|----------|-------------|
| VISHNU_TRANSFER_CMD | trCommand | TransferCommand | the command to use to perform file transfer. | NO       | YES         |

## 5.1.13 vishnu\_move\_file

#### Access

This command line can be used by any VISHNU user

## **Description**

The vishnu\_move\_file command executes a synchronous move of file.

#### Example of use

vishnu\_move\_file[-h][-r][-t trCommand] src dest

#### **Parameters**

| Parameter   | Туре            | Option | Description                                      | Required |
|-------------|-----------------|--------|--|----------|
| src         | string          |        | The source file to move following the pattern    | YES      |
| Sic         | Sumg            |        | [host:]file path                                 | LO       |
| dest        | string          |        | The path of the destination file                 | YES      |
| isRecursive | boolean         | r      | It specifies when the copy is recursive (case of | NO       |
| iskecursive | Doolcan         | 1      | directory) or not.                               | NO       |
| trCommand   | TransferCommand | t      | the command to use to perform file transfer.     | NO       |

#### **Environment variables**

| Name                | Parameter | Туре            | Description                                  | Required | User option |
|---------------------|-----------|-----------------|--|----------|-------------|
| VISHNU_TRANSFER_CMD | trCommand | TransferCommand | the command to use to perform file transfer. | NO       | YES         |

## 5.1.14 vishnu\_move\_async\_file

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_move\_async\_file command executes an asynchronous move of file.

#### Example of use

#### **Parameters**

| Parameter   | Type            | Option | Description   | Required |
|-------------|-----------------|--------|---|----------|
| src         | string          |        | The source file to move following the pattern [host:]file path      | YES      |
| dest        | string          | /      | The path of the destination file                                    | YES      |
| isRecursive | boolean         | r      | It specifies when the copy is recursive (case of directory) or not. | NO       |
| trCommand   | TransferCommand | t      | the command to use to perform file transfer.                        | NO       |

#### **Environment variables**

| Name                | Parameter | Туре            | Description                                  | Required | User<br>option |
|---------------------|-----------|-----------------|--|----------|----------------|
| VISHNU_TRANSFER_CMD | trCommand | TransferCommand | the command to use to perform file transfer. | NO       | YES            |

## 5.1.15 vishnu\_stop\_file\_transfer

#### Access

This command line can be used by any VISHNU user

#### **Description**

The vishnu\_stop\_file\_transfer command stops an execution of a set of file transfers.

#### Example of use

vishnu\_stop\_file\_transfer[-h][-i transferId][-m fromMachineId][-u userId]

#### **Parameters**

| Parameter     | Type   | Option | Description  | Required |
|---------------|--------|--------|--|----------|
| transferId    | string | i      | a given transfer id  | NO       |
| fromMachineId | string | m      | the machine that is the source or destination of the file transfer | NO       |
| userId        | string | u      | allows an admin to stop file transfers of a specific user          | NO       |

#### **Environment variables**

This command defines no environment variables.

## 5.1.16 vishnu\_list\_file\_transfers

#### Access

This command line can be used by any VISHNU user

#### Description

The vishnu\_list\_file\_transfers command displays the history of all file transfers submitted by User.

## Example of use

vishnu\_list\_file\_transfers[-h][-t transferId][-m fromMachineId][-u userId][-s status]

#### **Parameters**

| Parameter     | Type   | Option | Description  | Required |
|---------------|--------|--------|--|----------|
| transferId    | string | t      | a given transfer id  | NO       |
| fromMachineId | string | m      | the machine that is the source of the file transfer                  | NO       |
| userId        | string | u      | allows the admin to list file transfers initiated by a specific user | NO       |
| status        | Status | S      | the file transfer status   | NO       |

#### **Environment variables**

This command defines no environment variables.

## 5.1.17 vishnu\_get\_file\_info

#### Access

This command line can be used by any VISHNU user

## **Description**

The vishnu\_get\_file\_info command displays the information of files.

## Example of use

vishnu\_get\_file\_info[-h] path

#### **Parameters**

| Parameter | Type   | Option | Description                              | Required |
|-----------|--------|--------|--|----------|
| noth      | string |        | The file whose inode information will be | YES      |
| path      | string |        | displayed                                | 1 E3     |

## **Environment variables**

This command defines no environment variables.

## 5.2 Parameters definitions

**Enumeration FMS::FileType Type** 

| Name         | Value |
|--------------|-------|
| BLOCK        | 0     |
| CHARACTER    | 1     |
| DIRECTORY    | 2     |
| SYMBOLICLINK | 3     |
| SCKT         | 4     |
| FIFO         | 5     |
| REGULAR      | 6     |

## **Enumeration FMS::Status Type**

| Name       | Value |
|------------|-------|
| INPROGRESS | 0     |
| COMPLETED  | 1     |

| Name      | Value |
|-----------|-------|
| CANCELLED | 2     |
| FAILED    | 3     |
| UNDEFINED | 4     |

## **Enumeration FMS::TransferCommand Type**

| Name      | Value |
|-----------|-------|
| SCP       | 0     |
| RSYNC     | 1     |
| UNDEFINED | 2     |
